

## FuelCloud interfaces with dispensers, meters, and registers through programmable pulse outputs.

Most mechanical dispensers, meters, and registers have a pulse output capability or a way to add a pulse output. This is done by adding a pulser if you haven't had a fuel management system before, but we can help with that.

### Is my system compatible?

1. Refer to the **Common Hardware & Pulser Guide** on the backside of this document. FuelCloud is compatible if your dispenser, meter, or register is on this list of common hardware. If you haven't had a fuel management device before, see to the right of your make & model for pulser recommendations.
2. Didn't see your hardware on the list? That's okay, you may have a less common dispenser, meter, or register. Check online for a product guide of your make & model and search the document to see if the device has a "pulse output".

 Dispensers with digital protocol interfaces (RS232, RS485, Ethernet, etc) are not currently supported by FuelCloud. Please reach out to FuelCloud in the future to see if we've added this compatibility.

3. Not having any luck? Email [Sales@FuelCloud.com](mailto:Sales@FuelCloud.com) with your make, model and photos of your meter or inside of the dispenser and we will review and get back to you.
